

UTAH LOCAL GOVERNMENTS TRUST

To: Utah Local Governments Trust Members  
From: Doug Folsom, Loss Prevention Manager  
Subject: Transmissive Acoustic Inspection  
Date: November 16, 2018

Use of transmissive acoustic technology as part of a sewer system inspection and maintenance program would be an acceptable addition to an annual manhole inspection program and would in no way disqualify an inspection program under the Sewer Management/Manhole Inspection Program requirement of the Trust Accountability Program (TAP). In fact, an aggressive cleaning and inspection program in part based upon data acquired using transmissive acoustic technology could possibly qualify for a better or best (2 or 3) TAP performance rating on the sewer management requirement if the frequency of inspections and mitigation of identified system hazards is considered to be equivalent to the standards identified in the current TAP rating rubric.
